

ABSTRACT OF THE DISCLOSURE

A sheet package (9) to be set in a sheet storage unit (6, 106) of a printer (1) for supplying the printer with sheets comprises a stack of sheets (7) and a package member (8) covering the stack of sheets. When the sheet package (9) is set in the printer (1), the sheets (7) are supplied from the sheet package (9) to the printer (1) along a sheet feed direction. The package member (8) has a side part (53) spreading in parallel with the sheet feed direction and having an edge at its front in the sheet feed direction. On a side wall of the sheet storage unit (6, 106), a pressing member (41) for pressing a side face of the stack of sheets (7) is formed in order to align the stack of sheets (7) in a direction orthogonal to the sheet feed direction. The side part (53) places the package member at a proper position in the sheet storage unit (6, 106) in regard to the sheet feed direction by letting the edge make contact with the pressing member (41).

(54)Title: PAPER PACKAGE

(54)発明の名称: 用紙パッケージ

WO 2004/011355 A1

(57) **Abstract:** A paper package (9) set in the paper storage parts (6, 106) of a printer (1) for supplying paper sheets, comprising a plurality of stacked paper sheets (7) and a package material (8) for packaging the stacked paper sheets, the package material (8) further comprising a side part (53) extending parallel with the feeding direction of the paper sheets and having an end part at a front part in a paper feeding direction, wherein when the paper sheet package (9) is set in the printer (1), the paper sheets (7) are supplied from the paper sheet package (9) to the printer (1) along the paper feeding direction, a pressing member (41)
